

NORTH SEA HANDLING

An international company focusing on providing the maritime, offshore and aquaculture industry with market-leading solutions within equipment for cargo/passenger access and energy efficiency. Innovation and long-term-philosophy are key words in our everyday work.

About

North Sea Handling is an international company focusing on providing the maritime, offshore and aquaculture industry with market-leading solutions within cargo/passenger access equipment and energy efficiency. Our headquarters are on the west coast of Norway in the city of Bergen.

Over the years we have gained great insight into the industry and a lot of experience. By combining knowledge of ship operations with extensive knowledge of different technologies within our fields of expertise, we can assist our clients in their search for the best and most competitive equipment. Through our network of partners, we can provide our customers with service and turn-key deliveries both for new builds and conversions worldwide.

Innovation and long-term-philosophy are key words in our everyday work and together with our partners we are pushing boundaries to develop equipment and concepts to meet our customers' current and future needs. Innovation is our trademark and what drives us. Long-term-philosophy reflects the way we act and our view of what is most important in respect of value creation.

Services

Cargo and Passenger Access

Equipment constitute our core business and is represented, within the group, by NSH Ships Equipment. We are a supplier of state of the art equipment and are not afraid to shoulder the most demanding challenges to meet our customers' needs.

Cargo and passenger access solutions consist of a wide range of products which cover most types of ships such as Ferries, Cruise ships, Ro-Ro, Navy and Offshore Support Vessels. Ramps, Cargo Elevators, Doors, Hatch Covers, Tender Platforms, Side Loading, Launch and Recovery Systems are typical examples of equipment we deliver.

NSH Ships Equipment have also been part of several very complex and unique projects where we have acted as technical managers and senior advisors. We are not afraid of thinking outside the box, sharing our knowledge and experience to see our clients succeed.

NSH Ships Equipment is one of the few companies authorized by Norwegian and Swedish maritime authorities to carry out initial certifications and periodic control of cargo-handling equipment on ships, fishing vessels and deck cranes on mobile offshore units.

Energy Efficiency is more important than ever, both in respect of improving the economy and to reduce emissions to minimize our environmental footprint.

NSH Solutions are working closely with both operators and technology vendors within the maritime industry, focusing mainly on research and development of new energy efficiency solutions.

Improved hydrodynamic design of specific areas of ship hulls is one of our primary areas within this field. As fuel economy is linked to hydrodynamic design, this is and will be an important parameter in future ship design. Success in hydrodynamic design is therefore a key topic for environmentally friendly solutions and to be able to compete in a future market.

Engineering is at the core of what we do and is the driving force within the group. In addition to our engineering specialists in Norway we also have a company in Poland, in the city of Gdansk, focusing on engineering and R&D.
